SharkSim Developer

- Reduce Cycle Time
- Validate Models
- SPICE to IBIS Translation
- IBIS Quality Checker
- Automatic Correlation
- Support for IBIS Simulation

SharkSim Developer allows designers an easy way to model and validate components in high speed designs using IBIS models. Designers can generate and validate IBIS models for design and simulation with an easy to use GUI interface. The built in quality checker allows the designer to compare the actual IBIS model to the device datasheet to validate the quality of the model. IBIS models can be simulated into various test loads and correlated to model data with integration support with Synopsys HSPICE and other simulators.

With PCB designs becoming more complex and increasing bus speeds the need for simulation is even greater. But designers do not want to waste cycle time generating and validating simulation models for every design. SharkSim allows the designer to quickly generate and validate simulation models for the components in their high speed designs.

Contact us today to learn about how SharkSim can help your company.
